

SourceTrax™

Streamline the Management of In-House Sources

How are you tracking your sources?

SourceTrax™ stands as a revolutionary solution, seamlessly navigating the intricacies of regulatory compliance and procedural criteria specific to each site. Developed by WMG, this highly functional software is designed to streamline and enhance the management of in-house sources, ensuring accountability in line with federal regulations. SourceTrax™ is your key to effortlessly track, manage, and maintain an unlimited number of sources, offering unparalleled efficiency.

SourceTrax™ seamlessly integrates with the RADMAN™ suite, serving as an optional module since the release of RADMAN™ Suite 9.3 in the summer of 2017. Operating within the same cloud infrastructure and security measures, SourceTrax™ activates with ease once a contract is in place. No installation is required, providing users with immediate access to this invaluable application. Trust SourceTrax™ for unparalleled functionality and compliance in source management.

Source Input and Decay

Within this module, users can effortlessly create and modify source records. SourceTrax™, in compliance with 10 CFR Part 30.18, evaluates the licensing status of sources. It also determines the need for leak testing based on site-specific technical requirements.

Inventory Management and Search Capability

This module equips users with advanced search functionalities, including filtering, sorting, and grouping options. Users can perform ad-hoc searches, apply filters and groupings based on various criteria, and manage complete source information effortlessly. Bulk leak test updates, custom layouts for source inventory, and electronic logging streamline the management process.

Source Transfer and Disposal

Facilitating seamless source transfers, this module tracks source movement between locations and custodians. When sources reach the end of their useful lives, SourceTrax™ documents transfers to other NRC licensees or the disposal of sources. The software supports bulk transfers in a single program transaction, enhancing operational efficiency.

Reporting

The reports module is a powerful tool, generating essential documents such as Radioactive Source Inventory Cards, Accountability Records, Inventory by Location or Custodian, and custom user reports as needed.
